

YOUR FLOODCLIP® INSTALLATION GUIDE

Thank you for purchasing FloodClip! This guide will walk you through the installation process, ensuring a secure and efficient setup. By following these simple steps, you can maximise the performance of your flood defence and safeguard your property with confidence.

1.

STEP ONE

Pre-plan your layout. Start from the left-hand side, with the barrier to the right going on top. Place your first piece down on the floor.

2.

STEP TWO

Take your second piece and insert the tongue at the front left corner into the receiving slot on the first piece. Make sure to overlap the two pieces.

3.

STEP THREE

Lower the second piece onto the first so that the vertical upstand lines up with the receiving slot. Clip into the slot and slide the piece across.

4.

STEP FOUR

FLOODCLIP 50

Repeat this process with straight, corner and end sections.

FLOODCLIP 75

Overlap the end unit onto the end section and use a clip to connect them at the top.
